1 reChannelled — channel strategy software

Guide every customer to the right channel before they pick up the phone.

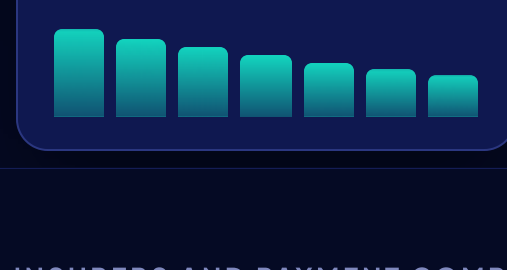

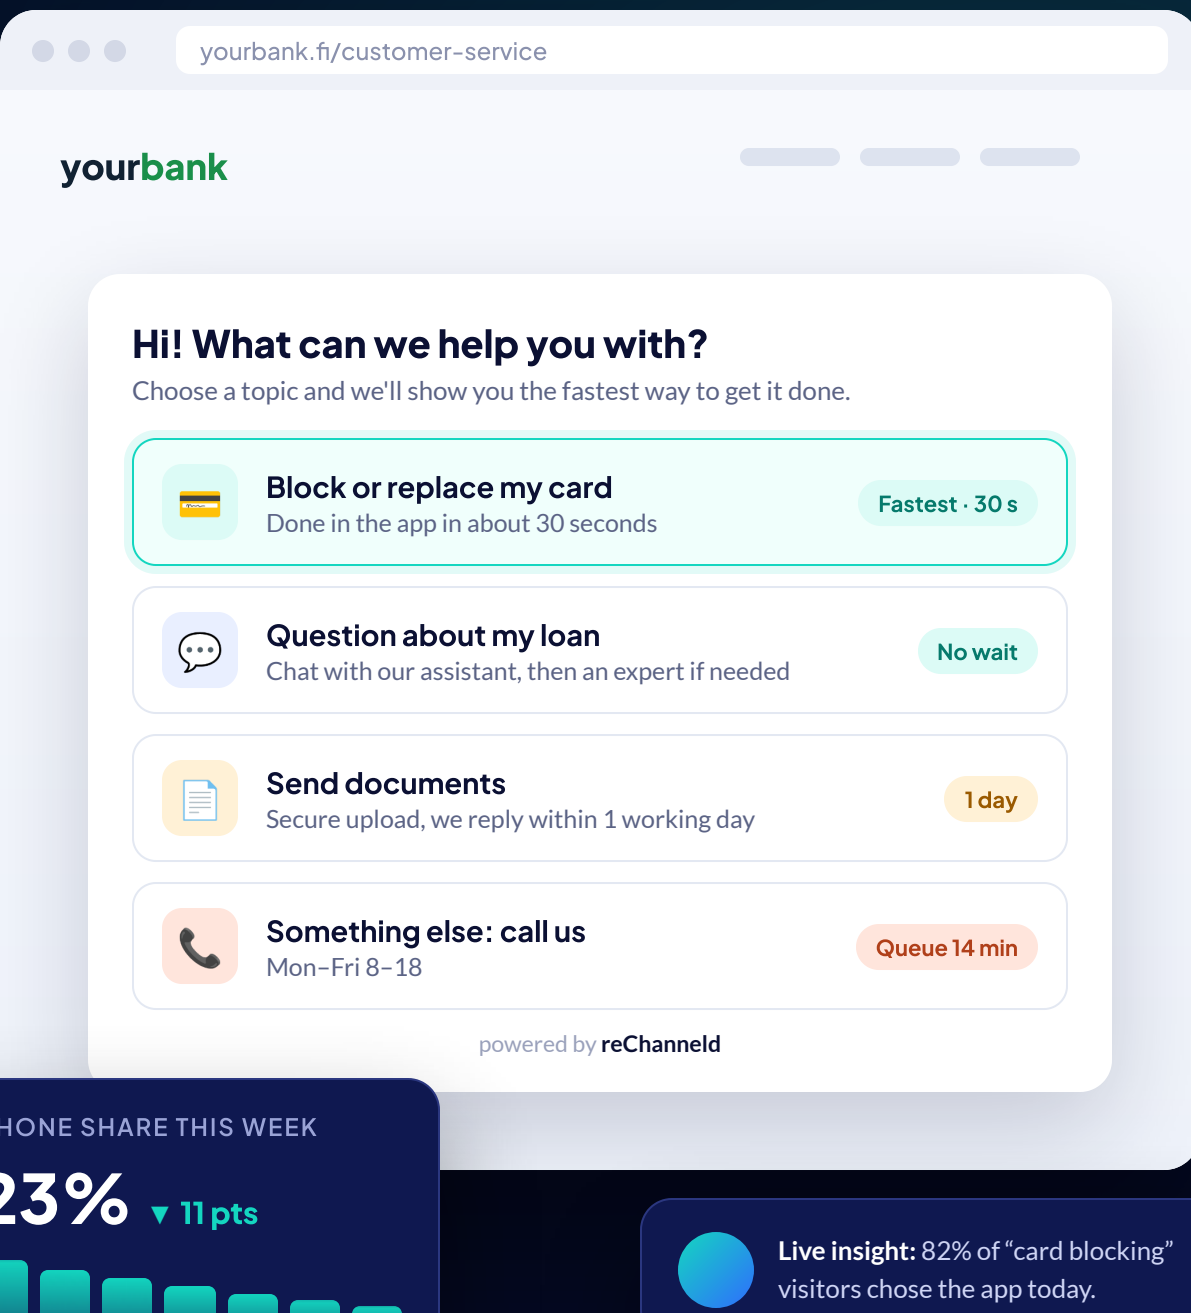

reChannelled sits on your website and app and uses behavioural nudges to steer each request to self-service, chat or the right team. Your automation finally gets used, and the phone queue gets shorter.

2 See it on your own website →

LAUREA

5 THE PROBLEM

You invested in automation. Your customers still call.

Phone and e-mail are habits. Without a nudge, customers go to the channel they know, even when an app or a bot could solve it in seconds.

Queues cost twice

Every avoidable call costs agent time and customer patience. The callers who really need a human wait longer too.

Self-service sits unused

Your chatbot, app and forms are good at their jobs. They just aren't where customers look first.

No one sees the full picture

Channel data lives in five tools. Nobody can say which topics should go where, or whether they actually do.

6 HOW RECHANNELLED WORKS

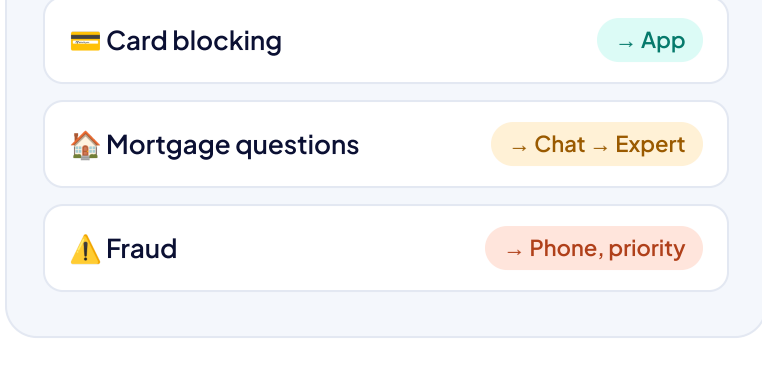

Map. Nudge. Learn.

A no-code console your customer service team owns. Your IT team doesn't need to build anything.

1

Map your channel strategy

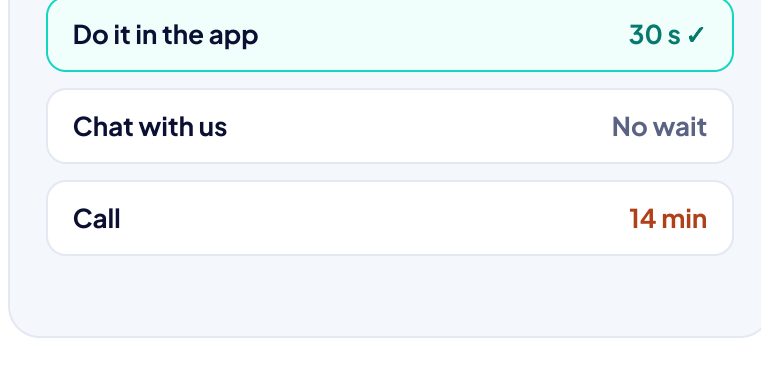

Decide topic by topic where each request should go: app, bot, form, chat or phone. Set different rules by time of day or queue length.

2

Nudge, don't block

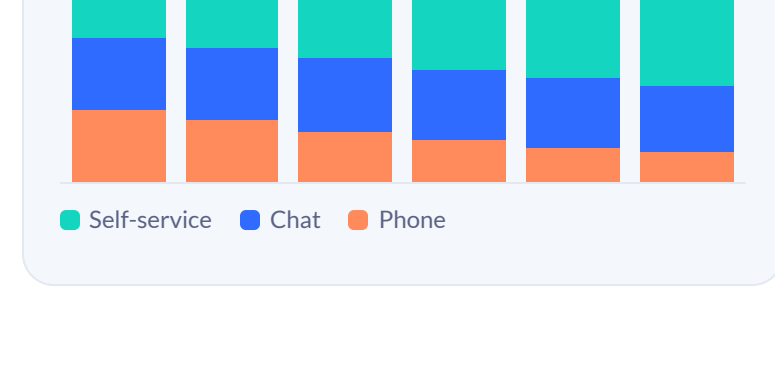

Customers see the best option first, with honest wait times and smart defaults. Every channel stays open. The easy path just becomes the obvious one.

3

Learn in real time

See where every topic ends up across channels. A/B test your nudges and show leadership what changed.

7 BUILT ON BEHAVIOURAL ECONOMICS

Five nudges that change channel habits.

reChannelled puts proven behavioural science into every customer contact. Here's what's in the toolbox.

Smart defaults

The recommended option is pre-highlighted, so the best path takes zero thinking.

"Fastest: do it in the app"

Honest wait times

Showing live queue length lets customers choose for themselves.

"Phone queue: 14 min"

Social proof

People follow people. Show which path most customers take for the same topic.

"8 in 10 customers solve this online"

Fewer, clearer choices

Showing four relevant options instead of twenty removes choice overload.

Topic-based menus

Positive framing

Talk about the time customers save, not the channels they can't use.

"Done in 30 seconds"

Made in Finland

Design from Finland

Developed in Helsinki with Nordic banks and insurers

8

S-Bank

S-Bank uses reChannelled next to its Aulis chatbot to guide customers to the best channel for their need, 24/7.

79%

of customer contacts are typically nudged to the client's preferred channel with reChannelled.

24/7

guidance on every visit, including evenings and weekends when your service team is offline.

9

VENDOR-NEUTRAL

Works with the tools you already have.

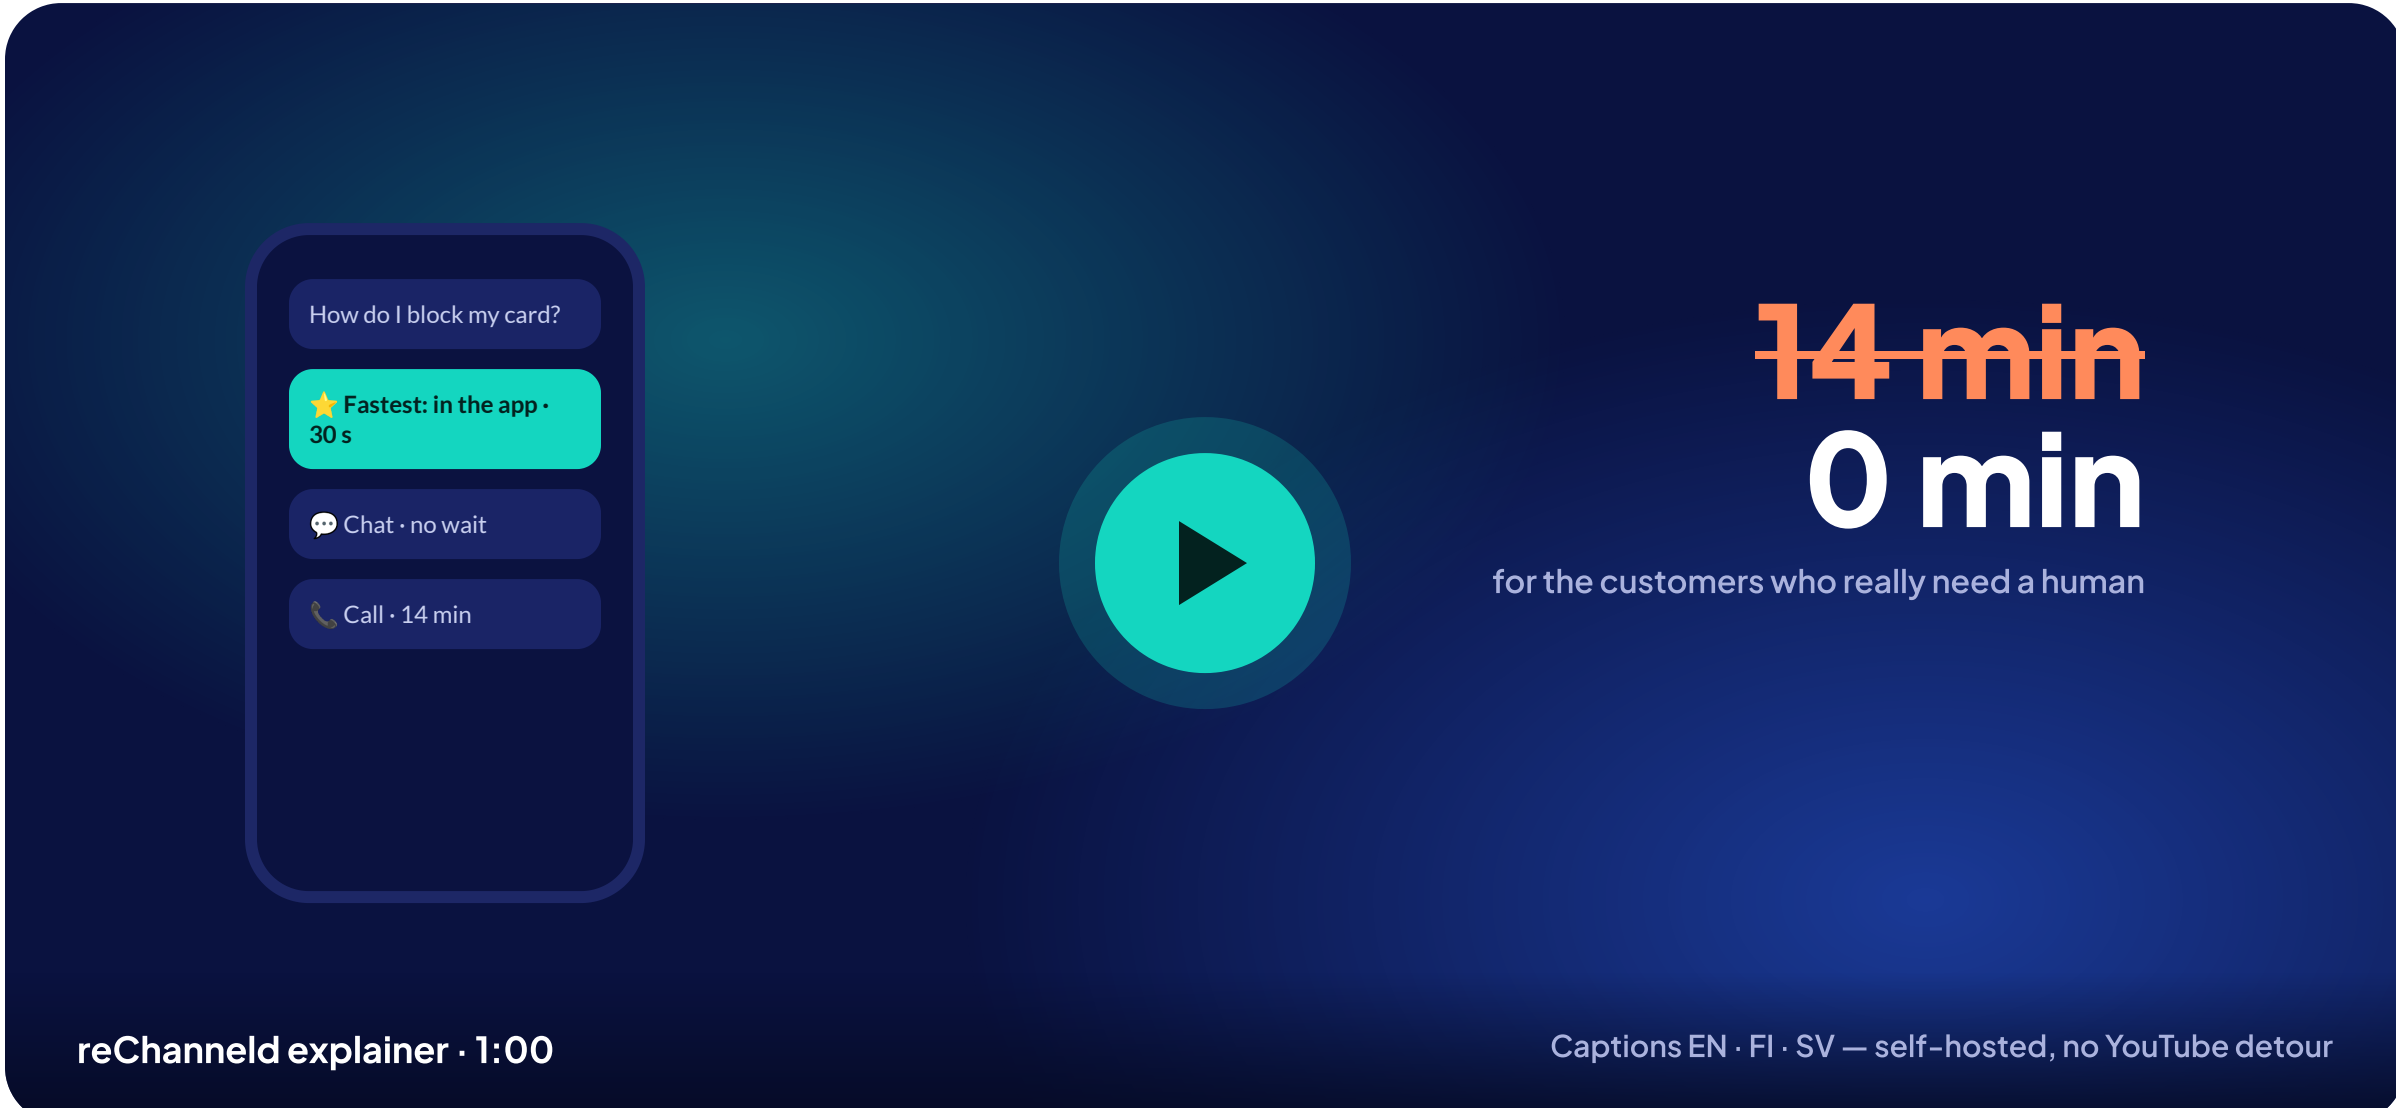

reChannelled isn't another chatbot. It's the layer that decides which of your channels each customer should use, and gets them there.

- ✓ Plugs into any chatbot, app, form or contact center platform
- ✓ Added to your site once, then configured by your own team
- ✓ Live queue and opening-hours data built into each nudge
- ✓ Analytics you can share with the CFO, not just the CX team

BUILT FOR HIGH-VOLUME SERVICE

Where reChannelled pays off fastest

Banking

Card, loan and account tasks routed to the app and digital services.

Insurance

Claims to e-forms, complex cases to experts.

Payments & fintech

Scale customer volume without scaling the service team.

Public sector

Help citizens find the right service the first time.

Utilities & telco

Get through outage and billing peaks without the queue.
