

First 30 Days

Wireframes & clickable prototype

15 screens across onboarding, the daily practice loop and the payoff moments. These are the low-fidelity companion to the "First 30 Days" concept deck.

- 1 Open this PDF in a viewer that supports links: Preview, Acrobat or a browser.
- 2 Jump to ► [Start the prototype](#) or pick a screen from the flow maps.
- 3 Tap anything outlined in **orange**. That's a hotspot. "Flow map" on every page brings you back.

- 14 Comeback
- 15 Progress

Onboarding

From install to a personal path in under two minutes

01 Welcome

Lead with the teacher people trust. Justin's face and voice come before any form.

02 Experience

One question sets the starting module, so beginners are never shown content above their level.

03 Why song

The user's own reason becomes the goal. The estimate is honest, and the easy songs are listed first.

04 Path & rhythm

The path makes the curriculum visible. A weekly rhythm with no streak to break replaces daily streaks.

05 Mic priming

Explain the mic before the system prompt appears. Saying no still leads to a complete experience.

Daily practice loop

Ten focused minutes, with progress made visible

06 Today

Home is the Practice Assistant turned into one button. The path card shows the goal song every day.

07 Lesson video

Same lesson content as the website, so there are no dead references to videos missing from the app.

08 OMC · ready

A clear goal, a personal best and a fallback that doesn't need the mic, all before the timer starts.

09 OMC · counting

Hands stay on the guitar. When detection is unsure it doesn't count and doesn't scold.

10 OMC · result

Turns progress you'd never notice into a number and a line. The only comparison is with the learner's own past.

11 Session done

Every session ends by showing how it moved the user along the path, which links the effort to the goal.

Payoff & return

The first song, the play-along, coming back and progress

12 Song unlocked

The payoff. Instant Play starts slow so the first play-through feels like a success.

13 Play-along

The existing play-along player with Instant Play. Simplified chords are always available, so there are no dead ends.

14 Comeback

Re-entry is shorter than a normal session. No streak shaming, and lowering the goal counts as a success.

15 Progress

Every skill shown is one the app actually measures. The sync status answers the most common store complaint.

Next steps I'd take: test this flow with 5 or 6 beginners holding a real guitar, check mic detection accuracy with engineering, then A/B test the onboarding and the weekly rhythm.
